## **Allowing each child to reach his or her greatest potential.**

## **Allowing each child to reach his or her greatest potential.**

Brains are built, not born. Children's earliest experiences determine whether brains are wired to provide a strong or weak foundation for all future learning, behavior and health. Because brains are built from the bottom up, much like a house, the first eight years set the foundation for all of the years that follow.

Brains are built, not born. Children's earliest experiences determine whether brains are wired to provide a strong or weak foundation for all future learning, behavior and health. Because brains are built from the bottom up, much like a house, the first eight years set the foundation for all of the years that follow.

To build a strong foundation, children need good health, strong families and high quality early child development experiences during this critical period.

To build a strong foundation, children need good health, strong families and high quality early child development experiences during this critical period.

---

There are only 2,000 days between the time a baby is born and when he or she will begin kindergarten.

During that time brain architecture is forming, creating the foundation for all future learning. Learn more at

**[www.first2000days.org](http://www.first2000days.org)**

When we invest in a child's First 2,000 Days, we create the best outcomes in education, health and economic well-being for everyone in North Carolina.

Together, we can help each child attain his or her full potential – physical, mental, emotional, spiritual, moral and social – in a loving environment.

*Child development is a dynamic interactive process that is not predetermined. It occurs in the context of relationships, experiences and environments.*
